Bibliography conversion from BibTeX format to AMSBIB format

V. Kozyakin*

January 13, 2024

When preparing manuscripts for publication in the vast majority (more than 150) of Russian mathematical journals, the Math-Net.Ru portal recommends that the bibliography be represented in the AMSBIB format.

If references to publications in Russian-language journals are indexed in Math-Net.Ru, there is no particular problem since the corresponding bibliographic records in the AMSBIB format can be copied from the corresponding pages of publications on the site Math-Net.Ru. The situation is worse with references to English-language publications, most of which are not indexed on Math-Net.Ru site, and for which, accordingly, bibliographic information in the AMSBIB format, as a rule, is not available. In this case, one has to manually compile the corresponding bibliographic records in the AMSBIB format, using widely available ones (for example, on the site MR Lookup, on journal sites, or on numerous bibliographic Internet services) corresponding bibliographic records in BibTeXformat.

Unfortunately, a direct correspondence between the fields of bibliographic records in the AMS-BIB and BibTeX formats does not exist. As a result, the process of translating records from one format to another becomes a complex and creative endeavor. When translating a limited number of publications, there are no significant challenges. However, when faced with the task of translating a substantial amount of bibliographic records from BibTeX to AMSBIB (such as in the preparation of a review or monograph), the process becomes arduous. Not only is manual translation prone to numerous errors, but it also heavily relies on the individual author's creativity.

To simplify and unify the process of converting bibliography from the BibTeX format to the AMSBIB format, I created `amsbib.bst` and `amsbibs.bst` style files that perform this conversion automatically. Moreover, the first of these style files creates a list of AMSBIB bibliographic records in the order of citation of publications in the work, and the second one in alphabetical order.

An example of such a transformation is given in the listing below, and its result is at the end of this work:

────────────────── Fragment of the example tex-file ──────────────────

```
1  \documentclass[a4paper]{article}
2  \usepackage[T1,T2A]{fontenc}
3  \usepackage[utf8]{inputenc}
4  \usepackage[english,russian]{babel}
5  \usepackage{amsmath,amssymb}
6  \usepackage[hyper]{amsbib}
7  ....................................
8  ......additional preamble stuff.......
9  ....................................
10 \title{....}
11 \author{....}
12
13 \begin{document}
```

---
*Institute for Information Transmission Problems, Russian Academy of Sciences, Bolshoj Karetny lane 19, Moscow 127051, Russia, e-mail: kozyakin@iitp.ru

```
14  \maketitle
15  ....................................
16  ..........publication text...........
17  ....................................
18  \nocite{*}
19
20  \bibliographystyle{amsbib}
21  \bibliography{example}
22  \end{document}
```

In this case, the bibliography itself (created using the `amsbib.sty` package) is both inserted into the pdf file created during the translation of the tex file, and placed into the `<file name>.bbl` file generated during the translation tex file.

We emphasize that both the bibliography file `.bib` and the tex-file using it must be in the same encoding. For example, in this work, `utf8` encoding was used. In the case of `cp866` or `cp1251` encodings, the `bibtex8` program should be used to process the bibliography, and when `utf8` encoding is used, the `bibtexu` program should be used.

The proposed style files `amsbib.bst` and `amsbibs.bst` are far from being perfect, they are only the first attempt in this direction. Therefore, **it is recommended that the resulting list of bibliographic records in AMSBIB format be carefully checked and, if necessary, corrected manually.**

Style files `amsbib.bst` and `amsbibs.bst`, and example files `example.tex` and `example_en.tex` can be downloaded from BibTeX to AMSBIB of my GitHub Pages repository kozyakin.github.io. The files of the AMSBIB package (`amsbib.sty` + `*.pdf`) required for translating examples are borrowed from amsbib.zip.

The following is an excerpt from the bibliography database `amsbib.bib` in the BibTeX format used in this example:

────────────── Fragment of the BibTeX database amsbib.bib ──────────────
